AeroVironment EV Solutions™ Charging Dock Model EVSE-RS

Face plate design may vary.
CUSTOMER SUPPORT

Before contacting Customer Support, write down the Serial Number of the Charging Dock.

As you stand facing the Charging Dock, look for the Serial Number on the left underside of the enclosure.

Customer Support Phone: 1-888-833-2148
Customer Support email: evscs@avinc.com

CHAPTER 1

INTRODUCTION
INTRODUCTION

Thank you for purchasing the AeroVironment (AV) Charging Dock Model EVSE-RS for use with your plug-in electric vehicle. This user guide shows how to use the Charging Dock and contains installation instructions for the electrician.

It is recommended that your Charging Dock be installed by a licensed, qualified electrician. To avoid serious injury or death, installation must be in accordance with the manufacturer’s installation instructions and must comply with the provisions of the National Electric Code (NEC) and all local codes. In cases of conflict between local codes and the NEC, local codes shall take precedence.
ELECTRIC VEHICLE COMPATIBILITY

The Charging Dock is designed to charge all SAE J1772 compliant vehicles including Electric Vehicles (EVs) and plug-in hybrid electric vehicles (PHEVs). SAE J1772 is an electric vehicle charging standard that has been developed by the Society of Automotive Engineers (SAE), the governing body of Automotive Standards in the USA.

The Charging Dock requires either a 240VAC split phase and neutral grounded, or a 208VAC 2 phases and neutral grounded 40-amp dedicated circuit. This circuit must be routed directly from the power distribution panel to the Charging Dock location.

FEATURES

- SAE J1772 Compliant
- Auto-restart in event of power outage or ground fault
- Integrated cable stowage with cable hanger
- Underwriters Laboratory (UL) compliant
- Breakaway safety cable
- Optional pedestal mount
- Quick read status indicators
IMPORTANT SAFETY INSTRUCTIONS

Please read these Important Safety Instructions and the charging instructions in your vehicle owner’s manual before charging your electric vehicle. Failure to do so can result in death or serious injury. Save this user guide for future reference.

There are many safety features built into the Charging Dock. Read all the safety information and warnings in this guide to be aware of any hazards and risks associated with installing and using the Charging Dock.

**NOTE** any missing parts and contact AV Customer Support for assistance on obtaining replacement parts.
SYMBOL USAGE
Take special note of all information marked with the following symbols:

**DANGER** indicates information about safety practices which, if not followed, may result in serious injury or death.

**WARNING** indicates information about safety practices which, if not followed, could result in personal injury or are necessary to prevent fire or equipment overheating.

**NOTE** indicates helpful information for installation or usage, but does not contain personal injury or equipment safety related information.
HIGH VOLTAGE WARNING

High voltage is present in your electric meter housing and power distribution service panel. Contact with high voltage can cause death or serious personal injury.

To clean the Charging Dock, wipe the Charging Dock with a clean cloth dampened with water or a mild detergent solution suitable for use on automobile paint. Do not use chemicals or solvents. Do not submerge the Charging Dock. Turn off the power to the Charging Dock at the circuit breaker and disconnect switch (if applicable) before cleaning it.
Do not operate your Charging Dock with a visibly damaged output cable or housing. Visually inspect the output cable (including the connector) and housing for damage before each use. If you detect any damage, stop using the Charging Dock and contact Customer Support for service.

If, at any time, you think the equipment is unsafe, shut off the electricity at the circuit breaker or disconnect switch (if applicable) and immediately contact Customer Support for service. DO NOT use your Charging Dock until the problem is identified and corrected.
ALWAYS position the Charging Dock output cable so that it will not be driven over, stepped on, tripped over, or otherwise damaged or stressed while in use. To prevent personal injury and damage to the Charging Dock and cable, ALWAYS stow the output cable after use.

The Charging Dock is intended to be used by licensed drivers only. Children should not be allowed to use this Charging Dock. DO NOT allow children to play in or around the Charging Dock. Close supervision of children is necessary when the Charging Dock is used.

Use this Charging Dock to supply power to Electric Vehicles equipped with a compatible vehicle receptacle only. For more information, see the vehicle owner’s manual.
State of California Proposition 65 Warnings:

- This product contains a chemical known to the State of California to cause cancer.
- This product contains a chemical known to the State of California to cause birth defects or other reproductive harm.
FCC INFORMATION

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

This product has been designed to protect against Radio Frequency Interference (RFI). However, there are some instances where high powered radio signals or nearby RF producing equipment (i.e. digital phones, RF communications equipment, etc.) could affect operation.

If you suspect your Charging Dock is receiving interference, take the following steps before contacting Customer Support for service.

1. Relocate nearby electrical appliances or equipment during charging.
1. Turn off nearby electrical appliances or equipment during charging.

Important! Changes or modifications to this product by anyone other than an authorized service provider will void FCC compliance.
SAFETY FEATURES

The Charging Dock is designed with your safety as the highest priority and includes the following convenient safety features to protect against the risk of electric shock:

- The Charging Dock is designed with a permanent grounding system for personal safety.
- The Charging Dock constantly checks for the presence of a service ground connection. If the service ground ever fails, the Charging Dock TROUBLE light turns ON and shuts power OFF to the vehicle.
- The Charging Dock is equipped with a Ground Fault Circuit Interruption (GFCI) reaction system to protect against electric shock. If the system detects an output ground fault, it will shut off power to the output cable and illuminate the TROUBLE light.
- The Charging Dock enclosure and cable assembly are completely insulated (no exposed live parts) to protect against electric shock.
- The Charging Dock connector and EV coupler are designed to minimize unintentional disconnection and to prevent exposing the user to live power if an unintentional disconnection occurs.
• Pilot wires in the cable and connector eliminate the possibility of electric shock when not connected to a vehicle or if an unintended disconnect occurs during a charge.

• When the Charging Dock connector is properly connected to the vehicle receptacle, the vehicle drive system is disabled. The output cable has a safety break-away feature in case the vehicle is moved or unintentionally rolls away from the parking location with the cable connected to the vehicle. The safety break-away feature will allow safe cable separation from the Charging Dock if the output cable is yanked or pulled with excessive force.

• The Charging Dock cable should be coiled up on the hanger when not in use to minimize potential cable damage and to eliminate the possibility of tripping over the cable.

If the cable becomes separated from the Charging Dock. DO NOT attempt to repair or service the Charging Dock and cable assembly yourself. There are no user serviceable components inside.
Only an authorized service technician can perform repair or service on the Charging Dock or the Charging Dock Warranty may be invalidated. Contact Customer Support for service.

VENTILATION
The AV Charging Dock will not work with Electric Vehicles (EVs) that require an external ventilation system. If the Charging Dock is connected to this type of EV, the Charging Dock will illuminate the “TROUBLE” light and not provide power to the vehicle. Contact Customer Support for additional information.
CHAPTER 2

USING YOUR CHARGING STATION
OVERVIEW

All the lights on the front panel are green when they turn on except the TROUBLE light which is red.

POWER PRESENT
Light turns on when power from your local utility is at the Charging Dock. This light should always be on if the circuit breaker and disconnect switch are both ON. (disconnect switch may be required by local permitting authority but may not always be present.)

VEHICLE CONNECTED
This light turns on when the Charging Dock is communicating with your vehicle and the connection was made properly.

READY TO CHARGE
This light turns on when the Charging Dock is ready to be connected to your vehicle.

VEHICLE CHARGING
This light turns on when power from the utility company is being provided to your vehicle. The light may stay on solid in the early stage of the charging cycle (if vehicle battery is low), then blinks later in the charging cycle, then finally goes out when charging is complete.

TROUBLE
This light turns on when the Charging Dock has detected an error and requires you to take action. See the Troubleshooting chapter on page 33.
STOP (PAUSE)
Interrupts the charging cycle at any time. If vehicle is connected to the Charging Dock, press START to resume charging.

CONNECTOR
Communicates between Charging Dock and vehicle and delivers power to vehicle.

CABLE HANGER
When cable is not being used, coil the cable over the cable hanger.

START (RESUME)
To resume charging after the STOP button was pressed. Also, to override a random time delay after a utility power outage.

STORAGE DOCK
Connector inserts into Charging Dock here and stays in place for storage when not in use.

LATCH RELEASE
Press to release connector. Then remove connector from Charging Dock or vehicle. The connector will not disengage unless you depress the latch.

KEY FEATURES

- FRONT PANEL
- LATCH RELEASE
- CONNECTOR
- CABLE HANGER
- CABLE
CHARGING YOUR VEHICLE

1. CHECK LIGHTS ON FRONT PANEL

First, make sure the POWER PRESENT and READY TO CHARGE lights are ON as shown below. This means that the Charging Dock is ready to charge your vehicle.

If the POWER PRESENT and READY TO CHARGE lights are not ON, please see the Troubleshooting chapter beginning on page 33 for possible solutions.
2. REMOVE THE CONNECTOR

Press the latch release and remove the connector from the Charging Dock.
3. CONNECT TO VEHICLE

Plug the connector into your vehicle’s charging receptacle and let go of the connector allowing the latch release to click and pop up into the “latched” condition to achieve a proper connection. When letting go of the connector, the latch release must click and come back up into position when connected to make a proper connection. The connector does not disconnect without pressing the latch release. The VEHICLE CONNECTED light turns ON when a proper connection is made.
4. AUTOMATIC CHARGE STARTS

The vehicle automatically starts charging and the Charging Dock supplies power as needed.

- POWER PRESENT, VEHICLE CONNECTED, and the VEHICLE CHARGING lights stay on when charging
- VEHICLE CHARGING light blinks when the vehicle is approaching the end of the charging cycle
- VEHICLE CHARGING light goes out when vehicle is fully charged.

Look for a gauge on the vehicle that verifies the vehicle is fully charged. See the owner’s manual that came with the vehicle to find out where the gauge is located.
TO STOP A CHARGING CYCLE

You can interrupt charging at any time using one of the two following methods:

METHOD 1 (Preferred)
Press the STOP button. After pressing STOP, the POWER PRESENT, READY TO CHARGE, and VEHICLE CONNECTED lights appear as shown below. The VEHICLE CHARGING light goes OFF. Press the START button to resume charging.
Once charging has resumed, the POWER PRESENT, VEHICLE CONNECTED, and VEHICLE CHARGING lights are ON as shown below:
METHOD 2
Press the latch release on the connector and remove from the vehicle as shown below. Charging stops and power stops flowing in the cable before the connector is fully withdrawn from the vehicle inlet receptacle.
The POWER PRESENT and READY TO CHARGE lights are ON as shown below.
5. CHARGE COMPLETE

When the vehicle has completed charging, the VEHICLE CHARGING light turns OFF, the POWER PRESENT, READY TO CHARGE, and VEHICLE CONNECTED lights turn ON as shown below.
6. RETURN CONNECTOR TO CHARGING DOCK

When the charge cycle is complete, press the latch release and remove the connector from your vehicle. Return the connector to the Charging Dock. The VEHICLE CHARGING light will be OFF.

The POWER PRESENT and READY TO CHARGE lights are ON as shown below.
USING YOUR CHARGING STATION

ALWAYS position the Charging Dock output cable so that it will not be driven over, stepped on, tripped over, or otherwise damaged or stressed while in use. To prevent personal injury and damage to the Charging Dock and cable, ALWAYS stow the output cable after use.

STRANGULATION HAZARD. Small children could become entangled in the output cable and be strangled. Keep small children away from the Charging Dock, and ALWAYS stow the output cable after use.
AUTO-RESTART

The Auto-Restart feature helps ensure that your vehicle will be charged and ready for use when needed. If a charge is interrupted due to a temporary error condition, the Charging Dock automatically clears any error codes when the cause of the temporary error condition returns to normal and then attempts to restart the charge. The TROUBLE light remains lit while the cause of the temporary error condition is active or awaiting a time-out delay.

The exception to immediate Auto-Restart is when the interrupt is due to a GFCI event. To allow charging after GFCI events caused by line surges or other disturbances, the Charging Dock will restart 15 minutes after a GFCI event, assuming the event did not occur immediately upon connecting power to the vehicle. The Charging Dock is limited to four automatic restarts after a GFCI event during a charge cycle. After the fourth attempt, the Charging Dock will shut down and the TROUBLE light will be ON. Contact Customer Support for service.
CHAPTER 2
USING YOUR CHARGING STATION

POWER OUTAGE RECOVERY

If there is a power outage, the utility grid might experience a large surge from multiple Charging Docks in your area attempting to resume charging simultaneously when power is restored. This would cause additional stress to the utility grid. The “Power Outage Recovery” feature avoids this scenario by resuming charge with an automatic delay after restoration of power. Power Outage Recovery ensures that Charging Dock users in your area will resume charging in a staggered fashion to avoid stressing the grid.

If a utility power outage occurs while your vehicle is being charged, the Charging Dock will automatically resume charging once power is resumed. The VEHICLE CHARGING light blinks and charging will re-start automatically after a randomly assigned time ranging from 0 to 20 seconds.
To override the automatic (random) delay after utility power is restored, press the START button on the Charging Dock to resume charging.
TIME OF USE METERING

Many electric utilities have been actively promoting the use of EVs and have developed specific utility rates to promote off-peak charging of these vehicles. This approach typically requires a second meter to separately monitor the electrical use of the Charging Dock. This allows the utility to charge rates on a ‘Time of Use” (TOU) basis, typically providing savings for overnight (off peak) charging and penalties for daytime (on peak) charging. Consult your local electric utility to determine Time of Use availability and cost.
CHAPTER 3

TROUBLESHOOTING
CHAPTER 3

TROUBLESHOOTING

CHARGING DOCK IS NOT AVAILABLE

If you experience difficulty with your Charging Dock or your vehicle battery does not charge properly, please read this Troubleshooting section for possible solutions before contacting Customer Support for service.

Do not attempt to repair or service the Charging Dock yourself. There are no user serviceable parts inside.

Only an authorized service technician can perform repair or service on the Charging Dock or the Charging Dock Warranty may be invalidated. Contact Customer Support for service.

NOTE

NOTE
If the Charging Dock is not available, use the Emergency Portable Cord Set that came with the vehicle as follows:

Use of an Emergency Portable Cord Set will charge your vehicle at a much slower rate than the Charging Dock.
Connect the Emergency Portable Cord Set from a dedicated 120 Volt wall outlet with Ground Fault Circuit Interrupt (GFCI) protection to the vehicle as shown below. The battery charger in the vehicle automatically detects low or high voltage inputs.

**WARNING**

Use only an Emergency Portable Cord Set that is approved by the vehicle manufacturer or you could damage the charger in the vehicle or the vehicle might not charge.

Use only the approved receptacle for the Emergency Portable Cord Set.
POWER PRESENT LIGHT DOES NOT TURN ON
1. Turn the circuit breaker in your power distribution panel OFF and then back ON.
2. Make sure the disconnect switch is ON (if present).
3. If the problem persists, contact Customer Support for service.

READY TO CHARGE, VEHICLE CHARGING, AND TROUBLE LIGHTS DO NOT TURN ON
1. Turn the circuit breaker in your power distribution panel OFF and then back ON.
2. If the problem persists, contact Customer Support for service.
VEHICLE CONNECTED LIGHT DOES NOT TURN ON WHEN THE CHARGING DOCK IS CONNECTED TO THE VEHICLE

1. Unplug the Charging Dock connector and reinsert it fully into the electric vehicle receptacle. Make sure the connector latch engages in the receptacle.

2. Inspect the Charging Dock cable and connector terminals for damage. If damaged, discontinue using immediately and contact Customer Support for service.

3. Inspect vehicle receptacle for damage. If damaged, discontinue using immediately and report the problem to your nearest service dealership.
VEHICLE CHARGING LIGHT DOES NOT TURN ON

1. If this occurs when the vehicle is connected and is charging, contact Customer Support for service.

2. If this occurs when the vehicle is connected but is not charging:
   » Attempt to charge using the Emergency Portable Cord Set that came with the vehicle as shown on page 36 in the Troubleshooting section of this user guide.
   » If a charge cycle starts, contact Customer Support for service.
   » If a charge cycle does not start, report the problem to your nearest vehicle service dealership.
TROUBLE LIGHT IS ON SOLID

The Charging Dock is one part of the Electric Vehicle’s charging system. A charger on-board the vehicle is the other part. TROUBLE light may be triggered by several sources including the Charging Dock, the utility service, the vehicle, or temperature extremes. See Troubleshooting tips below.

The TROUBLE light turns on when the Charging Dock detects an error whether the vehicle is connected or not. With the Trouble light on, the Charging Dock will not deliver power to the vehicle. The error must be corrected before charging starts or resumes. There are two scenarios for a solid TROUBLE light.
CHAPTER 3
TROUBLESHOOTING

SCENARIO 1
VEHICLE IS NOT CONNECTED

POWER PRESENT
READY TO CHARGE
VEHICLE CONNECTED
VEHICLE CHARGING
TROUBLE
CHAPTER 3
TROUBLESHOOTING

SCENARIO 2
VEHICLE IS CONNECTED

POWER PRESENT
READY TO CHARGE
VEHICLE CONNECTED
VEHICLE CHARGING
TROUBLE
1. Turn power OFF, then ON at circuit breaker and disconnect switch (if applicable).

2. If the fault persists, DO NOT USE the Charging Dock! Contact Customer Support for service.

**TROUBLE LIGHT BLINKS TWO TIMES AND REPEATS**

3. Caused by an error having to do with your electric vehicle.

4. Turn the circuit breaker and the disconnect switch (if installed) OFF then ON.

5. If the fault persists, contact Customer Support for service.

**TROUBLE LIGHT BLINKS THREE TIMES AND REPEATS**

1. Caused by a utility problem.

2. Turn the circuit breaker or the disconnect switch (if installed) OFF then ON.

3. If the fault persists, report issue to utility company.
CHAPTER 3
TROUBLESHOOTING

TROUBLE LIGHT BLINKS FOUR TIMES AND REPEATS
1. Caused by the Charging Dock mounted near an external heat source (furnace, water heater, etc.) or in direct sunlight.
2. Remove the heat source.
3. Provide shade from direct sunlight.
4. If the fault persists, contact Customer Support for service.

TROUBLE LIGHT IS RAPIDLY BLINKING
Press STOP.
A. TROUBLE light goes OFF
   1. Press START.
   2. TROUBLE light OFF - Charging Resumes.
3. If TROUBLE light turns ON
   a. Turn power OFF at circuit breaker and disconnect switch (if applicable).
   b. Disconnect from vehicle.
   c. Contact Customer Support for service.

B. TROUBLE light stays ON
1. Turn power OFF at the circuit breaker or disconnect switch (if applicable).
2. Disconnect cable from vehicle.
3. Contact Customer Support for service.
CHAPTER 3
TROUBLESHOOTING
CHAPTER 4

STEP-BY-STEP INSTALLATION

(FOR ELECTRICIANS ONLY)
INTRODUCTION

Read these installation instructions completely and carefully. They will save you time and effort and help to ensure optimum performance. Be sure to observe all listed dangers and warnings. Use only the screws, nuts, bolts, and washers included in the package.

AeroVironment recommends that your Charging Dock be installed by a licensed, qualified electrician. To avoid serious injury or death, installation must be in accordance with the manufacturer’s installation instructions and must comply with the provisions of the National Electric Code (NEC) and all local codes. In cases of conflict between local codes and the NEC, local codes shall take precedence.
SAFETY INSTRUCTIONS

SHOCK CAN KILL!

Touching live electrical parts can cause fatal shocks or severe burns. The input power circuitry and internal circuits are live whenever input power is on. An incorrectly installed or improperly grounded unit is a hazard.

Read all instructions and cautionary markings on the Charging Dock assembly. Warranty is void if the Charging Dock is wired improperly.

ELECTRICAL CAPACITY REQUIREMENTS

The Charging Dock requires either a 240 VAC split phase and neutral grounded or a 208 VAC 2 phases and neutral dedicated grounded circuit.
GROUNDING INSTRUCTIONS

This unit is to be connected to a grounded, metal, permanent wiring system; or an equipment-grounding conductor is to be run with the power circuit conductors and connected to an equipment grounding terminal or lead on Charging Dock ground strip. Connections to the Charging Dock shall comply with all local codes and ordinances.

This is a single phase device. Do not connect all three phases of a three phase feed.
PERSONAL PROTECTION EQUIPMENT (PPE)

The installer/service technician must wear Personal Protection Equipment (PPE) that meets current ANSI, ASTM, and OSHA safety standards. For this section, PPE is defined as:

- Safety Glasses or Goggles to prevent eye injury
- Safety Shoes designed to:
  - Prevent an electrical path to earth ground in the event of accidental contact with high voltages
  - Protect the feet from injury due to falling objects

During the installation procedure, the installer should also wear a hard hat for areas with low overhead clearances or confined spaces and gloves for areas where potential for exposure to unfinished lumber exists.
PACKAGE CONTENTS

Note any missing parts and contact AV customer Support for assistance with obtaining replacement parts.

Save all packaging materials in case of service or repair needs in the future. Please use the screws, nuts, bolts, and washers that came in the package.

Check all the parts in the package to ensure that nothing appears to be broken, damaged, or missing. Save the shipping cartons and packing materials in case the Charging Dock or cable was damaged in shipping. File a claim with the freight carrier and/or insurance company in the event of shipping damage.
HARDWARE KIT CONTENTS:
1 Mounting plate assembly
2 M10 - 1.5 x 25mm socket head screw
2 22 mm flat washer
2 3/8” x 21/2” lag bolts
2 13/32” flat washers
9 Stainless steel cover screws
2 #8 x 21/2” painted head wood screws
FRONT PANEL AND ENCLOSURE

ENCLOSURE/HOUSING

FRONT PANEL/COVER
1. OBTAIN PERMITS

Obtain all required permits from your local permitting authority before installing the Charging Dock.

2. BUILDING CODES

A representative Charging Dock installation as shown on the right is connected to the residential utility power distribution panel with a circuit breaker and a disconnect switch (if required by local permitting authority). The Charging Dock is designed for a permanently wired installation indoors in a garage or outdoors (in a carport or on a pedestal). While the Charging Dock is designed to be weatherproof, the customer may wish to consider adding personal protection from wet weather for his/her convenience. For more information on temperature ranges, see the Specifications section on page 83.

In addition to local building codes and ordinances, certain neighborhood, community, and homeowners’ associations have or are implementing Covenants, Conditions and Restrictions (CC&Rs) which may affect or prohibit external device installations. Review any CC&Rs to ensure compliance and avoid any potential conflicts.
Do not use the Charging Dock with a Class A circuit breaker.

AV recommends that the Charging Dock not be installed in a location that exceeds the operating temperature.
3. PREPARE TOOLS REQUIRED FOR INSTALLATION

Have the following tools ready to use:

- Standard Screwdriver
- Phillips Screwdriver
- Electrician Screwdriver
- Torpedo Level
- Torque Wrench
- Ratchet Set
- Channel Lock Pliers
- Wire Stripping Pliers
- Cutting Pliers
- #10 Torx Drive Screwdriver
- Measuring Tape
- Utility Tape
- Multimeter
- Torque Screwdriver
- Small Hammer
- Duct Tape
- M8 Allen Head Adapter
- 1.25" Hole Saw
- 3/8" Electric Drill
4. CHOOSE LOCATION

Choose a location to install the Charging Dock. Find the vertical stud in a wood-frame wall, suitable masonry wall, or optional post-mounting, to drill holes to attach the mounting plate for the Charging Dock.

The Charging Dock is supplied with lag bolts for stud mounting. Suitable fasteners may be needed for other mounting types.
5. DRILL HOLE FOR WIRE ENTRY (REAR OR UNDERSIDE)

Only one service wiring entry point into the Charging Dock is permitted: from the rear or the underside.

The hole in the rear allows rear wiring entry and the hole on the underside allows for lower wiring entry.

Identify the preferred wiring entry location in the Charging Dock and drill a hole at the preferred location dimple for the wiring entry. Do not exceed the maximum limit on conduit size.
CHAPTER 4

STEP-BY-STEP INSTALLATION
(for electricians only)

HOLE IN REAR OF CHARGING DOCK

HOLE ON UNDERSIDE OF CHARGING DOCK

Rear View

Bottom View
6. ROUTE WIRING AND/OR CONDUIT

Route wiring and/or conduit between the power distribution panel and the Charging Dock as required. Do not install a circuit breaker in the power distribution panel at this time. This will be done later.

7. USE MOUNTING PLATE AS A TEMPLATE AND DRILL SCREW HOLES

Hold the mounting plate up against the wall with the two small holes over a wall stud as shown below. Ensure that the mounting plate straight edges are plumb. Use the mounting plate as a template to mark lag bolt locations.

Example of wood frame construction installation:
8. INSTALL MOUNTING PLATE TO WALL AND TORQUE BOLTS

Drill pilot holes and mount the plate to the wall with the supplied lag bolts and flat washers as shown below. Torque the lag bolts until the mounting plate is securely fastened. Use appropriate anchors for masonry wall installation.
9. PULL WIRES OUT OF WALL AND PLATE (REAR CHARGING DOCK ENTRY ONLY)

Pull utility wires out of the wall (if rear hole of Charging Dock is used for wire entry) and through the mounting plate.
10. PREPARE TO ATTACH CHARGING DOCK TO MOUNTING PLATE

Prepare to attach the Charging Dock to the mounting plate as follows:

Lay the enclosure on a flat surface for the time being.
Remove the front panel from the enclosure.
11. HANG FRONT PANEL ON RIM OF CHARGING DOCK

Gently hook the front panel into the two slots on the lower rim of the Charging Dock.
12. UPPER MOUNTING HOLE

Attach the Charging Dock through the upper mounting hole as follows. Insert the supplied socket head screw and flat washer through the upper hole in the back of the Charging Dock into the upper hole of the mounting plate.
13. LOWER MOUNTING HOLE

Insert the supplied socket head screw and flat washer through the lower hole in the back of the Charging Dock into the lower mounting hole of the mounting plate. Tighten both screws to 50 in-lb (5.65Nm).
14. CONNECT CONDUIT TO ENCLOSURE
Connect conduit and/or cord grip to enclosure using appropriate hardware.

15. TURN POWER OFF
Turn AC power OFF at the main distribution panel.

Turn the power OFF at the Charging Dock dedicated circuit breaker at the power distribution panel to avoid electric shock. Observe all safety precautions.
16. CONNECT UTILITY WIRES AND CONDUIT

Connect utility wires and conduit to the internal connections and to the Charging Dock enclosure as follows:

1. Connect AC Power Phase wires Line 1 and Line 2 to the respective Terminal Block locations matching the labeled wires inside the Charging Dock. Torque the AC Power Phase Wire screws to 20 in-lb. (2.2 Nm).

2. Connect green Ground Utility wire to the Ground Strip. Torque the ground strip screw to 20 in-lb. (2.2 Nm).

Note: 240VAC delta connection with “high-C” may be used as long as ground to black (outside) input wire measures 120VAC.
17. FINAL ASSEMBLY

1. Complete inspection

To avoid having to reopen the Charging Dock panel, it is recommended to have the electrical inspector complete inspection of the Charging Dock wiring before closing the Charging Dock and power distribution panel.

2. Install the Charging Dock cover and torque all nine screws to 12 ±1 in-lb. (1.36 Nm).

Do not over or under torque screws. Use calibrated torque wrench.
Verify that the wires from the front panel circuit board are routed to prevent pinching between the housing and front panel during assembly.

Tighten front panel screws by hand within torque range. Do not use power screw driving equipment.
3. Install the outer trim ring by snapping it into the groove in the Charging Dock front panel.

To remove the trim ring, insert a flat head screw driver into the opening at location as shown on page 80.
18. MOUNT CABLE HANGER TO WALL STUD OR DRY WALL AND HANG CABLE

Using two painted head provided fasteners, attach the output cable hanger to the wall stud, dry wall, masonry wall surface, or pedestal 12 inches (31 cm) below the Charging Dock so that it is in line with the Charging Dock mounting location.

The hanger is supplied with screws for a wall stud mounting. Suitable fasteners may be required for other mounting types.

Select and drill mounting holes through as required from the rear of the hanger.
Use only an Emergency Portable Cord Set that is approved by the vehicle manufacturer or you could damage the charger in the vehicle or the vehicle might not charge.
19. INSTALL A 40 AMP CIRCUIT BREAKER
Install a 40 amp circuit breaker in the power distribution panel.

20. TURN THE POWER ON
Turn the power ON at the circuit breaker and at the disconnect switch (if applicable).

DANGER
Turn the power ON at the Charging Dock dedicated circuit breaker at the power distribution panel to avoid electric shock. Observe all safety precautions.
Notice the POWER PRESENT and READY TO CHARGE lights are ON. VEHICLE CONNECTED, VEHICLE CHARGING, and TROUBLE lights are OFF.
CHAPTER 4
STEP-BY-STEP INSTALLATION  (for electricians only)

21. SELF TEST*

Check to see that each light turns ON as follows:
1. Press and hold the START and STOP buttons at the same time for three seconds.
2. The POWER PRESENT light stays ON.
3. The READY TO CHARGE light goes out.
4. The VEHICLE CONNECTED, VEHICLE CHARGING, and TROUBLE lights turn ON and OFF one at a time going down. Then, they turn ON and OFF going back up. (They cascade going down then up).
5. When the test completes, the READY TO CHARGE light turns ON.

*Service Tool testing
It is highly recommended that AV Service Tool is used to test installation of Charging Dock. An authorized AV technician will have access to the Service Tool.

NOTE

If all lights do not turn ON, contact Customer Support for assistance.
22. INSPECTION

Schedule an appointment with an electrical inspector for your local permitting authority.

23. RETURN WARRANTY INFORMATION CARD

Installation is complete. Return the enclosed Warranty Information Card.
TO RE-OPEN THE CHARGING DOCK

(ELECTRICIAN ONLY)

DO this procedure AFTER the Charging dock was installed only if the inspector requires it.

Turn the power OFF at the Charging Dock dedicated circuit breaker to avoid electric shock. Observe all safety precautions.
1. Remove the Outer Trim Ring by pushing a flat blade screwdriver into the access slot at the bottom tunnel of the enclosure. Gently remove the outer ring all the way around the front panel.

2. Remove all nine (9) screws from the outer perimeter of the cover.

3. Pull the front panel off the enclosure.

4. Hang front panel as shown in the pictures on page 64.

5. Put the front panel back on the Charging Dock after inspection is complete as shown in the “Final assembly” on page 70.

6. Replace outer trim ring.

Specifications are subject to change without notice.
The AeroVironment, Inc. (AV) Home Charging Dock Model EVSE-RS (Charging Dock) is warranted to be free of defects in material and workmanship for a period of thirty-six (36) months from the date of original installation. In addition, if a Charging Dock is installed by AV or a certified member of AV’s licensed independent electrical contractor installation network, AV warrants that the original installation of the Charging Dock shall be free of defects in workmanship for a period of thirty-six (36) months from the date of installation.

THIS IS THE SOLE AND EXCLUSIVE WARRANTY GIVEN BY AV WITH RESPECT TO THE CHARGING DOCK AND INSTALLATION THEREOF. AV UNDERTAKES NO RESPONSIBILITY FOR THE QUALITY OF THE CHARGING DOCK AND INSTALLATION SERVICES EXCEPT AS OTHERWISE PROVIDED IN THE PURCHASE CONTRACT AND THIS WARRANTY. OTHER THAN EXPRESS AND/OR IMPLIED WARRANTIES REQUIRED BY APPLICABLE LAWS OR WHICH ARE REQUIRED TO EXTEND FOR A LONGER PERIOD, THERE ARE NO WARRANTIES THAT EXTEND BEYOND THIS LIMITED WARRANTY AND ANY REQUIRED WARRANTIES ARE LIMITED IN DURATION TO THE WARRANTY PERIOD.

To the extent permitted by applicable laws: (a) AV’s total warranty expense with respect to any Charging Dock and/or its installation is limited to a maximum of the original purchase price of that Charging Dock and/or its AV-certified installation as applicable to a warranty claim; (b) AV’s liability under this warranty shall be limited to the repair or replacement, at AV’s option, of defective Charging Docks, defective component parts or defective installation workmanship, together with any service call required to make repairs or replacements covered by this warranty; and (c) AV will not be liable for repair, replacement or service call costs for Charging Docks or installation workmanship not covered by this warranty, which shall be the responsibility of the purchaser.

This warranty shall be voided by damage or excessive wear to the Charging Dock caused by abnormal operating or environmental conditions (including exposure to acid, chemical fumes, metallic dust or extreme temperatures), accident, abuse, damage, misuse, vandalism, unauthorized alteration or repair, utility surges, or if the Charging Dock was not operated, serviced or maintained in strict compliance with the Home Charging Dock Model EVSE-RS User’s Manual and other printed instructions provided by AV. No installation services warranty applies if the Charging Dock is not installed by AV or a certified member of AV’s licensed independent electrical contractor installation network. Any evidence of an attempt to disassemble or reverse engineer the Charging Dock will void this warranty.
